

PHILIPS

Lifeline

GoSafe

Over 7 million people have counted on Philips Lifeline to feel safe at home

Now you can enjoy the same peace of mind on the go

Philips Lifeline invented the medical alert industry more than 40 years ago. We were the first to introduce a pendant-style help button with automatic fall detection. And now we offer **GoSafe – our most advanced mobile medical alert service** designed to provide access to help at home and on the go.

Featuring the power of up to six location technologies, GoSafe gives seniors the assurance to get up and go while having access to our 24/7, U.S.-based call response center, which serves more seniors and has saved more lives than any other medical alert service. GoSafe is the only mobile personal emergency response system to utilize this “hybrid” locating approach, which helps call center associates to locate seniors in need of assistance even in areas where GPS may not be available, such as indoors or in a parking garage.

Stay safe, healthy, and connected with Lifeline

Six advanced location technologies help find you at home or on the go

Features AutoAlert, proven fall detection that's relied on by over 250,000 seniors

The lightweight button is waterproof and has a long battery life

Two-way voice communication allows you to talk through the button

# How GoSafe works

## 1. Request help when you need it

GoSafe will automatically call for help if it detects your fall. Or, push your button anytime you need help – at home or when you are on the go.

## 2. Speak with a Response Associate

A Lifeline Response Associate will answer your call, access your personal profile and assess the situation. The mobile pendant has a built-in speaker and microphone so you can talk directly with our response center, through the pendant.

## 3. Have your location identified

GoSafe uses up to 6 locating technologies to help pinpoint your location so responders can find you quickly.

## 4. Know help is on the way

Our Associate will contact the help you want – a neighbor, family member or emergency services and will confirm that help arrives.

Coverage outside the home provided where AT&T wireless network coverage is available. AutoAlert does not detect 100% of falls. If able, users should always push their button when they need help. Recharging of the GoSafe Mobile Button battery is done by the user as needed, when connected to charger.
