

Philips Lifeline Voice Extension 68XT

Now subscribers can be heard here and there

Displaying a commitment to independence

The Lifeline service is built upon the importance of voice-to-voice communication. Subscribers value the ability to speak directly with a trained and caring Personal Response Associate. Yet, we frequently encounter subscribers who are concerned about what will happen in an emergency if they cannot be heard or are unable to hear the Lifeline Personal Response Associate.

We strive to assure our subscribers that even when we are unable to hear them in the event of a Help Call, our protocol is to send a responder. Nevertheless, it's easy to understand how the idea of waiting helplessly on the floor, wondering if help is on the way, may

cause anxiety and may even make subscribers less inclined to make use of the remote areas of their homes.

Being able to be heard during a Help Call is a common concern addressed by the Voice Extension 68XT. Designed for those who live in larger or multi-story homes, this accessory enables a second two-way speakerphone in the home to better enable voice communication in remote areas during a Help Call.

The Voice Extension 68XT is another way that Lifeline shows a commitment to enhancing our subscribers' sense of independence.

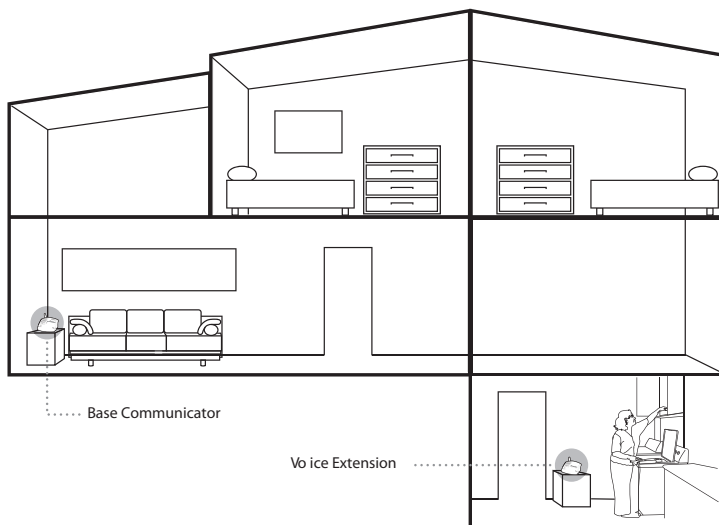

Benefits of the Voice Extension 68XT

For consumers

- Helps reduce anxiety over the ability to communicate in an emergency.
- Helps subscribers in larger homes feel more confident to make use of more areas of their home.
- Can alleviate the annoyance that some subscribers may experience when they have generated an accidental signal that they are unaware of because they are outside the audio range of their Communicator. Timely voice-to-voice communication could prevent the potential embarrassment and community impact of sending emergency services to the home.

For Lifeline programs

- Directly addresses a common concern, helping to improve subscriber satisfaction.
- Differentiates your program from competitors who don't offer a similar product.
- Positions Lifeline with your referral sources as continually seeking to enhance products and services through innovation and attention to customer needs.
- Provides a means of increased revenue per subscriber.

Key facts

- Requires an electrical outlet and a phone line connection.
- Supports all Help Calls but does not support remote call answering (R.S.V.P.) on normal telephone calls.
- Works only with the Model 6800XT Communicator and is not backwards-compatible with previous generations of Communicators, including the 6800.

Specifications

Color: Talc

Size: 7 inches wide, 6 ½ inches high, 6 ½ inches deep

Weight: 3 lbs.

Power requirements: 120V, 60HZ, 50mA
