Access to help – now without a phone line

The HomeSafe Wireless System

Now seniors can benefit from Philips Lifeline's leading medical alert service even if they don't have a home phone line. The new HomeSafe Wireless System from Philips Lifeline offers you the ability to provide either the standard Lifeline Service or the Lifeline Service with AutoAlert's advanced fall-detection technology so you can deliver uncompromised in-home performance without the need for a phone line. The HomeSafe Wireless System offers a variety of different help buttons based on user's needs, a Communicator with a high-quality 2-way audio and battery back-up, providing a connection to the Lifeline Response Center without the need for land line telephone service.*

Why Lifeline?
In a fall or emergency, every second counts. Delayed medical attention can jeopardize recovery and have an impact on the ability to remain living independently. The Philips Lifeline Medical Alert Service provides simple, fast access to help 24 hours a day, 365 days a year. Our most advanced technology, Lifeline with AutoAlert, provides an added layer of protection by automatically placing a call for help if it detects a fall, even if the user can't push their button. Now those who lack a home phone line can experience increased peace of mind with the HomeSafe Wireless System.*

* AutoAlert does not detect 100% of falls. If able, you should always press your button when you need help.
HomeSafe Wireless System
